P/N : HY-027 (A) Name : Water Level Sensor

Image :

Introduction :

The water level sensor is an easy-to-use, cost-effective water level/water droplet identification detection sensor that determines the water level by measuring the amount of water droplets/water with a series of exposed parallel wire traces. Easily complete the conversion of water volume to analog signal to achieve the effect of water level alarm.

Parameters:

Name : Water Level Sensor

Power : +3.0V -5.5V

Signal Type : Analog signal

Connector : XH2.54 × 3

Pin : S-Signal , V-Power , G-Ground

Instructions for use: The water level can be known by judging the output bit analog quantity.
